

# CRANE BODIES

## DURABILITY AND PERFORMANCE YOU CAN RELY ON

With the convenience and storage of a service body, Dakota Crane Bodies are designed and reinforced to support your specific heavy lifting needs.

Our Crane Bodies are available in 60" to 120" cab to axle lengths. At Dakota Bodies, we understand that truck bodies are not a "one size fits all" solution, which is why we offer you the ability to pick and choose your own custom crane body options to meet your unique work truck needs.

\*Crane not supplied or installed by Dakota Bodies.

for Corrosion Resistance

Crane  
Reinforcement  
Compartment (Curbside)

### Disclaimer:

If the cab/chassis truck that is being used to mount your crane body does not come with an AF dimension (rear axle to rear tip of frame) long enough to support the entire tubular service body crane support structure, it will be the responsibility of the licensed truck up-fitter to add frame extensions per the truck OEM recommended practices. Mounting of this body on a cab/chassis that does not have sufficient AF dimension to support the entire length of the tubular service body crane support structure will partially void the service body warranty.
